

GREATER STOCKTON  
CHAMBER OF COMMERCE

## PRESS RELEASE

For immediate release

# Press conference set to discuss a revolutionary new clean energy process

A press conference will be held in conjunction with the monthly board meeting at the at 4 p.m., March 29 in the conference room at the offices of the Greater Stockton Chamber of Commerce, 445 W. Weber Avenue in Stockton concerning the development of a new clean energy process.

SOG R & D CORP has contracted with the University of California, Davis to validate the SOG Dynamic Combustion Chamber. SOG R & D CORP was founded by three California businessmen that have filed with the United States patent office for their revolutionary device. The device will produce energy pollution free through a process of combining Hydrogen and Oxygen in an enclosed chamber that, when ignited, will produce energy, pollution free.

Dr. Paul Erickson, of UC Davis, is the director of "THE HYDROGEN PRODUCTION & UTILIZATION LABORATORY" and will do the verification testing for the SOG patent holders. Dr. Erickson has a Ph.D from the University of Florida with a minor in Environmental Engineering Science. Dr. Erickson has published

his research work in technical journals and conferences. The verification process is estimated to take approximately 6-12 months.

Former Greater Stockton Chamber of Commerce President Bob Olson (2000-2001), former board member Ed Stockton, and Carl Glasgow are the founders of the SOG R & D CORP. They are actively developing strategies to expedite the use of their patent in the steam and electrical production marketplace. A few of the advantages of using the SOG Dynamic Combustion Chamber are: 1.) NO "Greenhouse Gases" emissions, reduction in "Global Warming", 2.) NO smoke stacks and increase efficiency, 3.) NO air pollutants, only heat and water are produced, 4.) Renewable, Hydrogen most abundant element in the Universe, 5.) Cost effective to all other forms of energy.

The Hydrogen Highway and/or Hydrogen Economy is the next step to energy independence. SOG R & D CORP has truly invented the "Earth Friendly Energy" at the cutting edge of the USA becoming independent from conventional sources.
